CAGE 22C63

WHEN PUBLIC CONTENT IS HARD TO FIND AND STAFF WORK IS TOO MANUAL,

YRC helps small public agencies turn difficult websites, document libraries, portals, and internal workflows into clear systems the public can use and staff can maintain.

CORE SERVICE WEDGES

Website & CMS modernization Information architecture, content structure, migration planning, and staff-editable public web delivery.	Document libraries & public content Findable reports, agendas, minutes, policies, forms, and public records with clearer ownership and navigation.
Workflow, forms & dashboards Practical internal tools, dashboards, portals, and process automation for teams working around manual handoffs.	QA, UX & integration support Mobile and web usability review, accessibility-oriented risk review, and API/data handoff support within a defined scope.

WHY BUYERS USE YRC

Focused A practical engagement around a defined public-information or workflow problem - not a platform replacement by default.	Senior-led Direct attention to information clarity, delivery choices, and the handoff staff will actually need to operate.	Bounded Scope before scale: inventory, risk, and acceptance conditions are made visible before a larger delivery commitment.
---	--	--

SELECTED COMMERCIAL WORK SAMPLES

Public-facing web delivery Commercial website strategy, design, and implementation focused on clear messaging, stakeholder alignment, and maintainable content.	Operational field workflow A commercial custom iPhone and workflow platform with inspections, photo capture, structured records, status tracking, and management visibility.	Automation & reporting Commercial landing-page, review/notification, reporting, and management-visibility workflows that connect public-facing activity to staff operations.
---	--	--

These are commercial work samples, not government past performance. Named references and client details are released only when the buyer's requirements and permission controls are satisfied.

A PRACTICAL ENGAGEMENT PATH

1 DISCOVER Map priority public tasks, content, workflows, and risks.	2 DEFINE Return a buyer-readable roadmap and a bounded next-phase scope.	3 DELIVER Implement, test, train, and hand off within the agreed project boundary.
